

Dear InterPore Members,

We're pleased to share a valuable professional development opportunity made available through InterPore's membership in the **International Science Council (ISC)**.

The **ISC Media and Communications Training Programme** is designed to support early and mid-career researchers in strengthening their communication skills and increasing the visibility and impact of their research. As an ISC member organization, InterPore is helping to circulate this opportunity to our community. This opportunity has been brought to our attention through the work of Dr Tannaz Pak, who collaborates closely with ISC and its global research network.

About the Programme:

Running from 2024 to 2026, the programme includes a series of **online workshops** focused on core science communication topics, such as:

- Storytelling in Science
- Navigating the Social Media Landscape
- Developing a Social Media Strategy
- Creating Engaging Scientific Content
- Using Video to Communicate Science
- Measuring Impact and Stakeholder Engagement

These sessions are delivered by experienced science communication professionals from across the Asia-Pacific region and are designed to be practical and applicable across disciplines.

Why Participate:

- Learn to effectively communicate your research to non-specialist audiences
- Build confidence engaging with the media and public
- Connect with fellow researchers interested in science communication
- Gain insights and tools to share your work more widely

You can learn more about the programme and register your interest here:

 [ISC Media and Communications Training Programme](#)

We encourage InterPore members to explore this opportunity and consider taking part.

Best regards,

Tannaz Pak on behalf of the InterPore Society
