

9th Annual Conference of Mexico InterPore Chapter
UNAM Cultural Center of Querétaro
2-3 March 2023

In-person attendees of Friday session

The ninth **Annual Conference of Mexico InterPore Chapter** was held in a hybrid manner on the 2nd and 3rd of March 2023 at the Fundación Hall of the UNAM Cultural Center in Querétaro.

About forty researchers and academicians from throughout the nation attended. During the meeting, in-person attendees and remote participants gave lectures on a vast array of porous media- related research from various viewpoints. This year, there was a Kimberly Clark Distinguished Lecture titled “Vascular Materials: Predicting Design Evolution” given by Professor Adrian Bejan.

In addition, there was an interesting visit to the Geoscience Center in Juriquilla, Querétaro. PhD Sandra Vega organized this tour for the in-person attendees and during the meeting she supported the organization with her local committee.

The conference encouraged collaboration and knowledge sharing between researchers and students, and we are looking forward to organizing next year's meeting.

The organization of the chapter was led by the president Rodolfo G. Camacho-Velázquez, and his steering committee members Carlos Gilberto Aguilar-Madera, Anabel Hernández-Ramírez, Carlos Felipe Silva-Escalante, and Fernando Javier Alcántara-López.
